DISPOSITUS

à

Christiano Mentzelro. D.

Anno M.DC.LX.

L. S.

Superiore Tomo picturas AQUATILIUM, quæ BRASILIA continet, disposuimus; hoc vero VOLATILIUM. Naturali ordine, tanquam congenerum inter sese illud ita exigente. Ut enim squamigerum genus Aquas pinnis: sic Aëra pennigerum alis sulcat suis. Illud quandoq; ex salo (mirum dictu) catervatim emergens latioribus suis pinnis tanquam alis, volucrum ad instar, aëris petit altum: hoc vicissim ex Aëre præceps in altum ruens, undis innatat, seseq; piscium more submergit escam aucupandi gratiâ. Utrumq; genus eodem die simul fuit creatum ab Opifice Summo, quò constet proximum eorum & affine inter se genus. Factum hinc est, ut primo loco poneremus Avium aquaticarum picturas: easq; inter omnium primo palmipedum genus, quibus pinnarum loco piscium instar remigij pedes sunt. Post has, quarum digiti pedum nulla inter se tunica connectuntur, qua ratione palmipedes possint dici; sed qui nihilominus sulcandis aquis, & remigando in liquido apti longitudinem vice latitudinis à Natura et ejus Conditore adepti sunt. Has insequuntur Ciconiæ, Grues, et congeneres, quibus Natura tibias & fæmora cæteris longiora adaptavit, quò tantisper circa stagna, paludes & flumina aquis tantum inambulare, ranasq; aut quidquid aquatilium ex fundo ad ripas se confert, captare pro dapibus suis possint. Post Aquaticas aves collocatæ sunt Aëreæ magis ac Terrestres, sic dictæ, quod aërem potius & terram incolant, quam Aquas, & quod humi nidos componant, cibosq; conquirant. Selectus tamen inter eas est habitus talis, ut primum ponerentur illæ, quæ ex raptu vivunt, unde et rapaces dicuntur. Deinde cicures magis ac domesticæ, quæ hominibus assuetiores sunt. Atq; hoc respectu Vespertilionum genus tanquam inter Volatile & gressile, medium, ob insequentem Tomum tertium de Animalibus omnium ultimo reposui.
